

# 3FGL J1800.8-2402

This is difficult but not uncommon case when a single 3FG source (3FGL J1800.8-2402) morphed into several (in this case 4) 4FGL sources. The position of 3FGL source was close to two HI regions but 4FGL source are far. Can we trust those sources? We extracted the spectra of 3 brightest hard X-ray sources and looked for their counterparts in optical, NIR, and radio.
