

4FGL J0212.1+5321 (not really unIDed !)

This source is listed as unknown in 4FGL so it got selected for the analysis. However, we quickly realized that it is a known source – a redback candidate (no pulsations reported yet) based on optical identification of 21-hr binary with low-mass companion (Linares et al. 2016). CXO position allowed for identification.
