

4FGL J0340.4+5302

There are two relatively faint X-ray sources within the 4FGL positional uncertainty ellipse which is within the 3FGL ellipse and is significantly smaller. This gives more confidence to 4FGL source and its position. Saz Parkinson et al. (2016) classify (using ML) the 3FGL source as a young pulsar based on the 3FG properties alone.
